BT-631XI-AX

XPON With 4GE+1USB+2VOIP+2.4G+Wifi6 Product introduction

PON is a mature optical fiber access network technology, which integrates the advantages of low cost, high bandwidth, strong expansibility and other advantages. It adopts the passive spectral network and point-to-multipoint structure, which changes the problems existing in the active optical network such as many fault points, difficult maintenance and high operating costs.

BT-631XI-AX model ONU is a user terminal device independently developed by BTPT in line with such industrial background. The device has built-in two-layer switching function and three-layer routing function. With compact structure and small appearance, it is a kind of FTTH optical network unit with high performance and low power consumption, which is very suitable for the application requirements of various data services in FTTH networking scenarios of various operators. BT-631XI-AX is an XPON product that can be adapted to EPON and GPON networks without replacing equipment and firmwar.
